

AMENDMENTS TO THE SPECIFICATION

Please amend the specified sections of the specification below by deleting items marked with a strikethrough (i.e. ~~patent~~) or brackets (i.e., [patent]) and adding items marked with an underline (i.e. patent).

In the paragraph beginning on page 8, line 7, and in the section inserted after said paragraph in the previous preliminary amendment, please amend as follows:

The aroma, liquid, semi-solid or solid may either be molded into the toy 10 or impregnated therein after fabrication. It is envisioned that the aroma, liquid, semi-solid or solid is molded into the toy 10 during fabrication so that the quality is distributed throughout the toy 10. The aroma, liquid, semi-solid or solid may be refreshed by the twisting of the toy 10, by either the owner or the pet, or by chewing by the pet, thereby releasing oils contained in the aroma, or the juice of the liquid, semi-solid or solid. The aroma may be color coordinated to enhance the pet's association of sight and smell, combining the fetch and food instincts common in all breeds. For instance, the aroma of peanut butter may be associated with a brown or orange color of the toy 10. The aroma of non-pork meat, such as beef or poultry, may be associated with a green color of the toy 10. The aroma of bacon may be associated with a red or pink of the toy 10.
